Reference this during daily lead research. One page per section.

Primary ICP

ATTRIBUTE	TARGET	SIGNAL TO LOOK FOR
Stage	Series A to Series C	Crunchbase, LinkedIn about section
Team size	15 to 150 engineers	LinkedIn headcount filter
Market	US, UK, EU	HQ location or "serving global teams"
Platforms	Web plus mobile (iOS/Android)	"Cross-platform" or app store links
Product type	Dashboard, workflow, data product	Screenshots on their site
Verticals	Security, AI/ML, fintech, HR tech, developer tools, legal tech	Website category tag

The Moment They Become a Buyer

One or more of these is true. This is when they feel the pain.

Trigger signals

- Engineers are rebuilding the same component in multiple places
- Design and engineering are arguing about what "correct" looks like
- A new platform (iOS, Android, desktop) is being added and the team dreads inconsistency
- A rebrand or product redesign is planned and the current system will not survive it
- The team just hired their 3rd or 4th designer with no shared foundation
- A CPO or VP Product joined and their first audit found inconsistency everywhere
- An enterprise customer complained the product feels unpolished

Who Signs the Deal

TITLE	STAGE	HOW TO REACH	PRIORITY
CPO	Series A to C	Cold email + LinkedIn DM	Highest
Co-Founder / CEO	Pre-Series A to A	Cold email, decides fast	Highest
VP Product	Series B to C	LinkedIn outreach	High
VP Engineering	Series B to C	Mention token-to-code efficiency	Medium
Head of Design	Series B+	Needs CPO approval, slower	Low

Budget by Stage

STAGE	TYPICAL BUDGET	ENTRY POINT
Series A	\$5K to \$15K for a scoped system	\$750 UX Audit (credited toward project)
Series B	\$15K to \$30K for token architecture + components	\$750 UX Audit (credited toward project)
Series C	\$30K to \$50K for full cross-platform system	Direct project proposal

60-Second Lead Qualification

Open their site. Check these 4 signals. 3 of 4 green = add to portal.

SIGNAL	GREEN — Add to CRM	RED — Skip
Product type	Dashboard, workflow, data platform	Landing page only, consumer app
Platform	Web plus mobile mentioned or live	Web only, no mobile plans
Stage	Series A to C, visibly funded	Bootstrapped, pre-revenue, no team
Buyer title	CPO, CEO, VP Product, Co-Founder	Designer, PM, marketing role

Anti-ICP — Do Not Spend Time Here

Skip these immediately

- Consumer apps (B2C, social, gaming, entertainment)
- E-commerce or retail platforms
- Agencies that want design execution, not systems
- Companies with fewer than 5 engineers
- Founders without funding (no budget authority)
- Single-platform products with no mobile plans
- Companies where the design buyer is a junior designer
- Restaurant tech, fashion tech, education content

Proof Points by Vertical

VERTICAL	LEAD WITH THIS PROOF POINT
Security / AI	CYGNVS: 32% triage time reduction. AI cybersecurity platform, 60+ components.
SaaS product	60+ components, 180+ tokens, consistent across web, iOS and Android.
Fintech	Token architecture = faster audit compliance, consistent transaction UI across flows.
HR tech	Cross-platform design system = faster employee onboarding and reduced support load.
Devtools	Engineers stop rebuilding components. Design-to-dev efficiency gain, ship faster.
Data platforms	Visual hierarchy system = analysts make faster decisions on complex dashboards.

LinkedIn Connection Filter (for your 700+ US founders)

Stop at a profile if ALL of these match:

Stop and qualify

- Title contains: CPO, Co-Founder, CEO, VP Product, Head of Product
- Company size: 10 to 200 employees (check LinkedIn About)
- Location: SF, NYC, Seattle, Austin, Boston, LA, Atlanta
- Industry: SaaS, AI, fintech, security, devtools, healthtech
- Has a real product site (not just a LinkedIn page)

Skip immediately if

- Title is: Designer, PM, Marketing, Operations, Sales
- Company is: agency, consultancy, services firm
- No company website found or only a Linktree
- Email is Gmail or Yahoo (signals no active funded product)
